

OPTIBRAIN

The best brain food for adults & kids

The brain, a commander of our body, controls every part of our daily life. Our brain must send correct signals to the whole body for us to be able to keep a healthy and a normal life. Although the brain is only about 2% of human weight, it utilizes about 20% of the body's blood and oxygen supply. If the supply of blood which carries oxygen is stopped, brain cells will die that causes devastating effects on the nervous system and other organs. Due to the fact that healthy body is heavily relied on the healthy brain, after the years of study, the scientists conclude that the body can be restored to the normal condition by transporting exclusive nutrition through brain blood barrier (BBB). Through technological and biochemical advancement, OptiBrain packs several water and lipid soluble nutrition, which are essential to brain health, directly passing through BBB to repair brain cells and remove toxins in the brain.

Many external factors can contribute to deteriorated memory and brain functions, such as poor diet and lifestyle, stress, free radical damage, and chemical exposure. Research found that heavy metal toxins, such as mercury, arsenic and aluminum, are commonly found in human bodies that contribute to lots of symptoms and chronic diseases. Beverage, water, fish, soil, dental fillings, cooking pots, many medications, and creams are heavily toxic sources of these metals. The heavy metals accumulated in our brain, bone, liver and kidney play a role in causing headache, upset stomach, anemia, insomnia, fatigue, mental deterioration, and etc. Furthermore, these harmful substances deposited along our nervous system disturb communication between cells that lead to malfunction of other systems and organs.

Internal factor that causes aging brain cells is the toxins generated by cellular metabolism. The life of brain cells is approximately 30 to 50 years. These external and internal factors could cause premature aging that account for the forever loss of brain cells.

OptiBrain, a creative and cutting edge formula, is made from a blend of twenty-four herbal extracts that prevent the body from undesirable side effects. By passing through blood brain barrier, Phosphatidylserine, Phosphatidyl Choline, Linolenic Acid and Vitamin F can help support brain repair and health, improve depression, and maintain central nervous system's proper functioning. Triterpenes, Flavone Glycosides, Ginkgo Biloba Leaf Extract, Quercetin increase oxygen and blood flow to the brain, enabling us to stay focused, alert, and functioning at peak mental capacity. Cyanocobalamin preserves chemical balance in the brain, and decreases toxic substances generated by protein metabolism. Besides, Proanthocyanidin is a powerful antioxidant which can promote healthy blood circulation, especially throughout the vast network of tiny blood vessels of the brain. Kidney Bean, Oleanolic Acid, Chicory and Rosemary extracts are essential nutrients for heart health by strengthening heart's contractions and protecting against irregular heartbeats and lower blood pressure. In addition, other nutrients work in chorus to promote immune and nervous system health, support better concentration and attention, modulate blood pressure, improve vision, as well as promote emotional well being.

Dr. Norman Smith

Dr. Norman Smith states that " I believe OptiBrain provides a 'simple solution' to complex cognitive problems, and saves the patients from complex solutions to their simple problems." According to Dr. Smith, when a person takes the OptiBrain as directed, the proprietary blend, (the secret) bridges the blood brain barrier and delivers the nutrients and herbal alkaloids helping to dilate blood vessels, enhancing circulation in the brain, improving oxygen utilization, nutrient and waste removal and exchange. By removing the heavy metals, petrochemicals, pesticides, and other metabolic toxins, the ATP can do its job at cleaning and repairing the brain thus restoring the body to its natural state which is HEALTH.

OptiBrain has been clinically demonstrated to effectively improve symptoms caused by aging brain cells. Dr. George Gray, board certified in naturopathic medicine, internal medicine and psychiatry doctor, has been recommending "OptiBrain" as a food supplement to many patients since 1998. It includes patients who have memory problems, loss of memory, low energy, blood pressure related problem, stress, anxiety and other neurological concerns. In addition to its clinical demonstration, World Organization of Natural Medicine has awarded recognition for this product formulation with an award "Excellence Product Development" in 2006. OptiBrain are produced with the highest quality and potency, providing general well being for our body.
